

## Saint Luke's Advanced Care Pharmacy Medication List

Saint Luke's Advanced Care Pharmacy provides patients with specialty medications to serve their health care needs. Our team is specially trained to meet these needs, including working with the care team and insurance company. We provide personal service to ensure patients receive the full benefit of their therapy, including patient education, monitoring for and control of side effects, and adherence monitoring.

### Characteristics of Specialty Medications

Specialty medications are defined as high-cost oral or injectable medications used to treat complex chronic conditions. These are complex medications, typically biology-based, that structurally mimic compounds found within the body. High-touch patient care management is usually required to control side effects and ensure compliance. Specialized handling and distribution are also necessary to ensure appropriate medication administration.
